

## Troubleshooting ThinLINE Hydraulic Ratcheting Torque Wrenches 5K and 10K Models

Problem	Possible Solutions
<b>The cylinder does not extend or retract.</b>	The "Quick Disconnects" are not connected properly. Check your connections.
<b>The "Quick Disconnects" will not lock, or will not release.</b>	The hydraulic hose is still pressurized. Release the pressure in the hose.
<b>The wrench locks up on the bolt.</b>	The anti-reverse pawl is jammed. Release the anti-reverse pawl.

### Storage Tips

- When storing the ratchet wrench fully, retract the cylinder.
- Rinse and clean the wrench after every job, then lubricate with light oil film.
